

DEAR INDUSTRIALISTS AND ENTREPRENEURS!

The negative effects of the global financial crisis force businesses to seek all opportunities to reduce costs and improve efficiency. One of the common problems of all market participants is the over-bureaucratic, high cost and low efficiency of conventional communications systems between enterprises via telephone, fax and paper correspondence. The endless price rises of time, paper and telephone services make this problem even more relevant for business.

Today e-mail is the only real alternative to a paper letter, phone or fax. It gives a tremendous savings of time, paper and the cost of telephone calls in addition to efficiency at light speed.

On the other hand, rapid innovation development of digital internet-technology and computerization of the business life have created the necessary technological basis for a decisive move of business to new reliable, economical, comfortable communication systems.

Such a system isn't theory already but it is a real working Internet portal DATA-BANK.COM.UA!

This is highly effective corporate online system, which removes such expenditure lines as stationery expenses and telephone charges from the financial reports of business, and it also greatly increases the speed and efficiency of the structures responsible for sales and for supplies.

This system combines the advantages of e-mail with the opportunities provided by modern Internet technology to work with huge amounts of commercial information.

Our purpose is creating the most comfortable environment for your work, so you can:

1. Work with customers quickly and with minimum time, communication and stationery costs;
2. Receive accurate and timely information about necessary goods, products and services as quickly as possible and find new business partners;
3. Quickly receive and send orders by email, specifications which can be of any size and contain from one to tens of thousands of commodity items.

The number of system participants the range of the products submitted by them are daily increasing. As an example of system capacity we can cite a German company [ROLF WEBER KG](http://ROLF.WEBER.KG), which specializes in the supply of bearings, belts, chains, pumps and which placed in the system 50 thousand positions of their products.

We invite you to get involved in innovative internet - sites DATA-BANK.COM.UA!
